

PROJECT REVIEW REPORT

Project ID	292
Project Name	150 MW Grid Connected Wind Power Based Generation Project in Gujarat India
Program(s)	VCS
Verification Period	18 June 2016 – 30 September 2019
Project Proponent	BLP Vayu (Project 1) Private Limited
Methodology	ACM0002: Grid-connected electricity generation from renewable sources --- Version 19.0
Sectoral Scope(s)	1. Energy (renewable/non-renewable)
Validation/Verification Body (VVB)	Earthood Services Pvt Ltd
Assessment Criteria	VCS Standard, v4.0
Date of First Issue	25 June 2020
Date of Final Issue	23 July 2020

Summary:

An accuracy review of the 150 MW Grid Connected Wind Power Based Generation Project in Gujarat India verification approval request has been conducted by Verra in accordance with Section 4.3 of the *Registration and Issuance Process*, v4.0.

The accuracy review has raised 1 assessment findings and no minor findings, detailed below. The VVB, in coordination with the project proponent, is hereby required to provide a response to the assessment findings presented in Section 1. The 1 assessment findings must be addressed to the satisfaction of Verra.

This project review report will be made publicly available. Confidential information may be provided as separate attachments.

1. ASSESSMENT FINDINGS

Finding 1

Section 4.1.14 of the *VCS Standard v4.0*, states that the VVB must use the *VCS Verification Report Template* and adhere to all instructional text within the template.

Section 4.1 of the *VCS Verification Report Template* requires an identification of the implantation status of the project activity(s) and a description of the steps taken to assess the following:

- The existence of any material discrepancies between project implementation and the project description.
- The implementation status of the monitoring plan and the completeness of monitoring, including the suitability of the implemented monitoring system (i.e., process and schedule for obtaining, recording, compiling and analysing the monitored data and parameters).
- The existence of any material discrepancies between the actual monitoring system, and the monitoring plan set out in the project description and the applied methodology.
- Whether the project has participated or been rejected under any other GHG programs since validation or previous verification.
- Whether the project has received or sought any other form of environmental credit or has become eligible to do so since validation or previous verification.
- Whether the GHG emission reductions or removals generated by the project have become included in an emissions trading program or any other mechanism that includes GHG allowance trading.
- Sustainable development contributions.

Additionally, Section 4.1 requires the VVB to provide an overall conclusion regarding whether the project has been implemented as described in the project description.

Section 4.1 of the verification report does not include all the relevant information as required by the template.

The VVB is requested to update Section 4.1 of the verification template to include all relevant information as required by the template including regarding whether the project has been implemented as described in the project description.

VVB Response:

The section 4.1 of the FVR included an overall conclusion as per verification template. Thank you

Verra Response:

The update to Section 4.1 of the verification report now includes an overall conclusion. Therefore, this finding is closed.

2. MINOR FINDINGS

No minor findings were raised.

3. ASSESSMENT CONCLUSION

On 24 June 2020 Verra concluded an accuracy review of the verification request for project 292 150 MW Grid Connected Wind Power Based Generation Project in Gujarat India.

On 25 June 2020 Verra issued a project review report with one finding, detailed above to Earthood Services Pvt Ltd.

On 10 July 2020 Earthood Services Pvt. Ltd sent a response back to the finding raised by Verra.

On 23 June 2020 Verra concluded that the response was sufficient and closed the review.
