

PROJECT REVIEW REPORT

Project ID	1893
Project Name	18 MW Kemphole Mini Hydel Scheme (KMHS), by International Power Corporation Limited, India
Program(s)	VCS
Verification Period	20 October 2017 to 30 September 2021
Project Proponent	International Power Corporation Private Limited
Methodology	ACM0002, Grid-connected electricity generation from renewable sources, v20.0
Sectoral Scope(s)	1. Energy industries (renewable / non-renewable sources)
Validation/Verification Body (VVB)	4K Earth Science Private Limited
Assessment Criteria	VCS Standard, v4.1
Date of First Issue	26 January 2022
Date of Final Issue	23 April 2022

Summary:

An accuracy review of the 18 MW Kemphole Mini Hydel Scheme (KMHS), by International Power Corporation Limited, India verification approval request has been conducted by Verra in accordance with Section 4.3 of the *Registration and Issuance Process*.

The accuracy review has raised two assessment findings and no minor findings, detailed below. The VVB, in coordination with the project proponent, is hereby required to provide a response to the assessment findings presented in Section 1. The two assessment findings must be addressed to the satisfaction of Verra.

This project review report will be made publicly available. Confidential information may be provided as separate attachments.

1. ASSESSMENT FINDINGS

Finding 1

Section 1.1 of the monitoring report states that actual emission reductions achieved for this monitoring period are 108,926 tCO₂e.

Section 5.4 of the monitoring report states that the emission reductions for the monitoring period are 112,482 tCO₂e.

The project proponent is requested to clarify the total emission reductions achieved during this monitoring period eligible under the VCS Program. The VVB is requested to assess the updates and to update the verification report, as needed.

VVB Response:

The correct emission reduction achieved during the monitoring period eligible under VCS program is 112,482 tCO₂e. PD now corrected the ER in section 1.1 of MR to 112,482 tCO₂e.

Verra Response:

Section 1.1 of the monitoring report has been updated to reflect that 112,482 tCO₂e have been achieved this monitoring period. This finding is closed, and no further action is required.

Finding 2

Section 4.1 of the verification report states that the “project is in line with the registered CDM PDD except the deviation described in section 3.3 above.”

Section 3.3 of the verification report does not describe a project description deviation. Section 3.2.2 of the monitoring report also does not describe a project description deviation.

The VVB is requested to clarify if a project description deviation has been applied during this monitoring period or in any previous monitoring periods.

VVB Response:

This is a mistake in the verification report. There is no deviation applied in the monitoring period. Hence, reference to the deviation has been removed in the FVR.

Verra Response:

Section 4.1 of the verification report has been updated. No deviations have been applied during this monitoring period. This finding is closed, and no further action is required.

2. MINOR FINDINGS

No minor findings were raised.

3. ASSESSMENT CONCLUSION

On 26 January 2022, Verra sent 4K Earth Science Private Limited the project review report with two assessment findings.

On 23 April 2022, Verra closed all findings and approved the verification approval review.
