A great project turning non-recyclable waste into off-grid electricity replacing carbon emissions. There needs to be many more of these projects.

Is the project planning to opt for decarbonization, CCUS technology, also in lieu of the project getting its credit since 2021, does it want to transition the project t from CDM to Article 6.4 Paris Agreement Mechanism as the credits gained through CDM shall get null and void the moment the implementation of registration of projects under transition begin after 31st December 2023.
