

PROJECT REVIEW REPORT

Project ID	1862
Project Name	Bundled Wind Power Project in Gujarat and Tamil Nadu
Program(s)	VCS
Verification Period	01 March 2019 to 31 July 2021
Project Proponent	M/s Venus Textile Service, M/s JB Ecotext LLP, M/s J. Korin Spinning Private Limited, M/s Oriilion India Private Limited
Methodology	AMS-I.D., Grid connected renewable electricity generation, Version 18.0
Sectoral Scope(s)	Sectoral Scope 01: Energy (renewable/non-renewable)
Validation/Verification Body (VVB)	TÜV SÜD South Asia Pvt Ltd
Assessment Criteria	VCS Standard, v4.1, AMS-I.D., v18.0
Date of First Issue	09 November 2021
Date of Final Issue	12 December 2021

Summary:

An accuracy review of the Bundled Wind Power Project in Gujarat and Tamil Nadu verification approval request has been conducted by Verra in accordance with Section 4.3 of the *Registration and Issuance Process*.

The accuracy review has raised six assessment findings and one minor finding, detailed below. The VVB, in coordination with the project proponent, is hereby required to provide a response to the assessment findings presented in Section 1. The six assessment findings must be addressed to the satisfaction of Verra. The VVB need not address the minor findings during this review. Please note, however, that where Verra finds consistent minor findings by the VVB in future reviews, minor findings shall be escalated to assessment findings.

This project review report will be made publicly available. Confidential information may be provided as separate attachments.

1. ASSESSMENT FINDINGS

Finding 1

Section 3.4.3 of the *VCS Standard, v4.1* states that “The project proponent shall use the *VCS Monitoring Report Template...* and adhere to all instructional text within the template.”

Section 2.1 of the *VCS Monitoring Report Template, v4.0* instructs the project proponent to summarize any potential negative environmental and socio-economic impacts.

The project proponent does not discuss any socio-economic impacts in this section.

The project proponent is requested to provide more information about any socio-economic impacts. The VVB is requested to assess the updates accordingly.

VVB Response: Socio-economic impacts have been included in the section 2.1 of the revised MR.

Verra Response:

Section 2.1 of the monitoring report has been updated to include information about any socio-economic impacts of the project. This finding is now closed, and no further response is required.

Finding 2

Section 3.1 of the *VCS Monitoring Report Template, v4.0* instructs the project proponent to include information about the implementation status of the project activity, including information on events that may impact the GHG emission reductions or removals and monitoring during this monitoring period.

Section 3.1 of the monitoring report does not include any information about the operation of the project activity during this monitoring period.

The project proponent is requested to update Section 3.1 of the monitoring report to include information about the project activity during this monitoring period. The VVB is requested to assess the updates accordingly.

VVB Response: Relevant dates including the commissioning date have been included in section 3.1 of the revised MR.

Verra Response:

Section 3.1 of the monitoring report has been updated to include information about the operation of the project activity during this monitoring period. This finding is now closed, and no further response is required.

Finding 3

Section 3.2.2 of the monitoring report and Section 3.3 of the verification report state that the project proponent only installed the main meter at the Theni and Gujarat sites, as opposed to a main meter and a check meter on both sites. The project proponent and VVB report that this deviation has no

impact on the project applicability conditions, baseline conditions and additionality.

However, the project proponent and VVB did not discuss how the deviation impacts the accuracy of monitored data and parameters, and if it impacts the methodology requirements.

Thus, the project proponent and VVB are requested to provide more information about how this deviation impacts the accuracy of the monitored data and parameters and the methodology requirements.

VVB Response:

The MR and the Verification report provides more information on the project deviation.

Verra Response:

Section 3.2.2 of the monitoring report and Section 3.2 of the verification report have been updated to confirm that the project description deviation does not impact the accuracy of monitored data and parameters and the methodology requirements. This finding is now closed, and no further response is required.

Finding 4

Section 5.1 of the *VCS Monitoring Report Template, v4.0* instructs the project proponent to quantify the baseline emissions reductions and/or removals, providing sufficient information to allow the reader to reproduce the calculation.

While the project proponent provides the calculation of the baseline emissions reductions, the information is not sufficient to allow the reader to reproduce the calculation.

The project proponent is requested to update Section 5.1 of the monitoring report to include more information, specifically on how $EG_{PJ,y}$ is calculated. The VVB is requested to assess this update accordingly.

VVB Response: Site specific net generations which include the breakup for all the sites have been included in section 5.1 of the revised MR, has been checked and confirmed by the audit team.

Verra Response:

Section 5.1 of the monitoring report has been updated to include a breakdown of the parameter $EG_{PJ,y}$ across the monitoring period. This finding is now closed, and no further response is required.

Finding 5

Section 4.1 of the *VCS Verification Report Template, v4.0* instructs the VVB to assess whether the project has participated or been rejected under any other GHG programs, has received or sought any other form of environmental credit or has become eligible to do so, and whether the GHG emission reductions or removals generated by the project have become included in an emission trading program or other mechanisms. The verification report template also instructs the VVB to assess the project's sustainable development contributions.

Section 4.1 of the verification report does not include this information.

The VVB is requested to update Section 4.1 of the verification report to include this information.

VVB Response:

Sec 4.1 has been revised to include the project participation under any GHG program and also explain on the sustainable development contribution of the project activity.

Verra Response:

Section 4.1 of the verification report has been updated to include an assessment of whether the project has participated or been rejected under any other GHG programs, has received or sought any other form of environmental credit or has become eligible to do so, and whether the GHG emission reductions or removals generated by the project have become included in an emission trading program or other mechanisms. Information about the project's sustainable development contributions have also been provided. This finding is now closed, and no further response is required.

Finding 6

Section 4.4 of the *VCS Verification Report Template, v4.0* instructs the VVB to describe the steps taken to assess whether manual transposition errors between data sets have occurred.

Section 4.4 of the verification report does not discuss any manual transposition errors.

The VVB is requested to update Section 4.4 of the verification report to include any manual transposition errors and how this was assessed.

VVB Response:

Sec 4.4 has been revised to update the same.

Verra Response:

Section 4.4 of the verification report has been updated to include an assessment of any manual transposition errors. This finding is now closed, and no further response is required.

2. MINOR FINDINGS

Finding 1

Sections 1.2 and 2.2 of the verification report refers to *VCS Standard, v4.0* instead of *VCS Standard, v4.1*.

The VVB is requested to update Sections 1.2 and 2.2 of the verification report to refer to the most updated version of the *VCS Standard*.

3. ASSESSMENT CONCLUSION

On 09 November 2021, Verra completed the review of the VCS verification approval request for Project 1862, Bundled Wind Power Project in Gujarat and Tamil Nadu, the result of which can be found above. The project review report was sent to TUV SUD with six assessment findings and one minor finding.

On 12 December 2021, Verra closed all findings, and no further response is required.
