1 PROJECT DETAILS

1.1 Summary Description of the Implementation Status of the Project

The project activity is the bundling of **812** Wind Turbine Generators (WTGs) sponsored by **397** individual investors aggregating to a total installed capacity of **460.18 MW**. All these WTGs are spread in the entire State of Tamilnadu, India and the bundling activity is undertaken by Tamilnadu Spinning Mills Association (TASMA). All these WTGs are commissioned and connected to the Southern Regional Grid, India. There are no changes in the implementation and it is in line with the registered PD.

The intent of the Project Activity is to reduce GHG emissions and promote sustainable development by use of renewable energy (Wind) for generation of power by bringing together a number of investors with small power requirements to invest into wind turbines. In the absence of the project activity, the equivalent amount of electricity would have been generated by the power plants connected with the southern grid which is predominantly based on fossil fuel.

For this verification period the WTGs which are in operation alongwith the commissioning dates are summarised as below:

1.9 Participation under other GHG Programs

The project activity has never been rejected under any other GHG program. However, it is registered under CDM (UNFCCC No: 4760 Crediting period starting from 18th December 2012 to 17th December 2022). Further, the VCU revenues are considered only for the period during which no CDM/CER benefits are claimed.

The project proponent further declares that there is no double counting claimed by any of the wind turbines covered under this project for the same monitoring period. This can be further witnessed and cross verified through the windmill HTSC Nos, Capacity and date of commissioning. The declaration to this effect is submitted to the VVB.

1.10 Other Forms of Credit

Not Applicable

1.11 Sustainable Development

I) Social well being

The project activity generates 804 GWh of power per year from clean and renewable source (wind). The districts of Kanyakumari, Tirunelveli and Coimbatore of Tamilnadu where the WTGs are located now, had no proper road connectivity prior to the project commencement. It is only after the installation of the windmills, there is improvement in road connectivity in these areas. These roads are being used by the local villagers. The feedback from the local people, points to the positive impact of the project. The project will also aid the State electricity grid in

meeting out their electricity demand. The local residents near the project sites are getting employment and new business opportunities are growing due to this project activity.

II) Economic well being

The lands purchased for the wind farms are mostly barren lands and are located in the remote areas. After commencement of this project activity, there is an increase in the value of these lands which would have otherwise fetched lower revenue. The local residents are also getting jobs as a result of the project activity. There is an increase in the business opportunities for the local people in establishing small shops and allied activities. In addition to the above, there are some rural and infrastructural developments around the wind farms.

III) Environmental well being

The project activity generates clean energy without any GHG emissions which is commonly associated in the field of electricity generation. Hence, the project related GHG emissions are nil for the project activity, as it uses natural energy (wind) as the only source for the purpose of electricity generation.

IV) Technological well being

All the WTGs in the project activity are from well-known International Manufacturers with latest technology. This will further demonstrate the development of new technologies in harnessing the renewable energy and will promote further percolation of developed technology throughout the world. The clean renewable electricity thus generated is being supplied to the respective grid to meet out the demands.

2 SAFEGUARDS

2.1 No Net Harm

There is no negative environmental and socio-economic impact.

The wind power being a cleaner source for electricity generation does not require compliance of any local laws and regulations. However, the essential documents

like No Objection Certificate (NOC), Energy Purchase Agreement or Energy Wheeling Agreement have been executed with TNEB/TANGEDCO before the start date of the individual WTGs.

Table: Relevant applicable laws & regulations and Compliance status of the project activity

Regulations	Compliance status
NOC from TNEB	Complied
EPA with TNEB (if sale to utility)	Complied
EWA with TNEB (if wheeling)	Complied

2.2 Local Stakeholder Consultation

The local stakeholders have already been contacted for the first bundled CDM project of TASMA. For the second project, a questionnaire survey was conducted covering the people living in the villages nearby the site. The overall opinion expressed through the questionnaire was based on the experience of the local stakeholders with the already existing windmills. The overall response was that the impact of windmills in the locality is of positive nature. The responses are categorised as positive and negative based on the comments. The positive responses indicate that respondent feels that the project activity will lead to overall good for the society. All of the individual respondents are of the view that the project activity is of good to them and to the society as well. It has really added to the electricity generation of the state grid without causing any pollution. No negative comments were received that required follow up action.

2.3 AFOLU-Specific Safeguards

3 IMPLEMENTATION STATUS

3.1 Implementation Status of the Project Activity

All the WTGs are operating continuously depending on the wind availability. The electricity available for carbon credit for this monitoring period is 21,729 MWh (rounded down).

All the WTGs involved in the project activity are already commissioned and operational. The WTGs are under operation since the date of commissioning and no event has been identified which may impact GHG emission reduction.

3.2 Deviations

3.2.1 Methodology Deviations

There is no Methodology deviation.

3.2.2 Project Description Deviations

There are no Project deviations.

3.3 Grouped Projects

This is not a grouped project.

4 DATA AND PARAMETERS

4.1 Data and Parameters Available at Validation

Data / Parameter	EF _y

Description	Baseline emission factor
Source of data	CEA database version 4
Value applied	0.927305 tCO ₂ e/MWh
Justification of choice of data or description of measurement methods and procedures applied	The grid emission factor (EF _{grid}) was calculated from the operating margin (OM) CO ₂ emission factor and build margin (BM) CO ₂ emission factor, referenced from "CO ₂ Baseline Database for Indian Power Sector" by Central

	Electricity Authority (CEA). The weighting of operating margin emission factor and weighting of build margin emission factor are 0.75 and 0.25, respectively. The calculation of OM and BM is as per the version 1.1 of "Tool to calculate Emission Factor for an Electricity System.

4.3 Monitoring Plan

The monitoring activity will be centrally executed by TASMA. The organization for monitoring will be as follows:

The responsibilities of Management structure are

1. TASMA:

- a. Reviewing the monthly and annual statistics.
- b. Evaluating the GHG performance of the project activity.
- c. Identify opportunities for further improvement.

2. Regional representative:

- a. Reviewing the GHG performance related parameters as recorded by the Site In-Charge regularly.
- b. Implementation of appropriate corrective measures in case any discrepancies are identified in the reported parameters.

c. Ensuring calibration of the monitoring equipment as per the defined
calibrationschedule

3. Site In-charge:

The Site In-charge (O&M Service provider/Company personnel) besides operation and maintenance of the wind turbine generators will record monthly energy meter reading jointly with TNEB officials and submits the generation Statement to the TASMA as and when called for.

The **Metering** for WTGs of the project activity is carried out as under:

The monthly meter reading is being taken jointly by the Parties (TNEB/TANGEDCO and the Site In-charge) on a fixed day of the month. At the conclusion of meter reading on each occasion, an appointed representative of the TNEB/TANGEDCO shall sign the meter card provided for this purpose and the entries made is verified by the site in-charges. The TNEB/TANGEDCO meter reading is used for recording electricity generation and the same is sealed by TNEB/TANGEDCO and shall not be interfered other than TNEB/TANGEDCO personnel. Emission reduction calculation is based on the Generation Statement issued by TNEB/TANGEDCO.

5 QUANTIFICATION OF GHG EMISSION REDUCTIONS AND REMOVALS

5.1 Baseline Emissions

Baseline emissions calculated are summarized as below.

Base Line Emissions: (BE_y)

According to the validated PD, Baseline Emission is calculated by the following formula.

$$BE_y = EG_y * EF_y$$

Baseline emission factor (combined margin)

$$EF_y = 0.927305 \text{ t CO}_2\text{e/MWh}$$

$$EG_y = 21,729 \text{ MWh}$$

$$EG_y = 21,729 * 0.927305 = 20,149 \text{ tCO}_2\text{e (rounded)}$$

5.2 Project Emissions

Project Emissions: (PE_y)

According to ACM0002, there is no project emission for grid connected wind-based power generation. Hence in this case it is considered as **PE_y = 0 tCO₂/year**

5.3 Leakage

According to ACM0002, there is no leakage emission for grid connected wind-based power generation. Hence in this case it is considered as **LE_y = 0 tCO₂/year**

5.4 Net GHG Emission Reductions and Removals

Emissions Reduction: (ER_y)

For a given year, the emission reductions contributed by the project activity is calculated as follows:

$$ER_y = BE_y - PE_y - LE_y$$

Where,

ER_y – Emission Reductions for the year 'y'

BE_y - Base Line Emission for the year 'y'

PE_y - Project Emissions for the year 'y'

LE_y - Leakage for the year 'y'

Year	Baseline emissions or removals (tCO ₂ e)	Project emissions or removals (tCO ₂ e)	Leakage emissions (tCO ₂ e)	Net GHG emission reductions or removals (tCO ₂ e)
Year 2012 (From 18 th Dec 2012 to 31 st Dec 2012)	20,149	0	0	20,149
Total	20,149	0	0	20,149

The ex-ante annual average ERs are 750,893 tCO₂/ year
As per the registered VCS PD, Section 7, from the year 2004, all the Windmills have started its operation and accordingly the ex-ante estimated GHG ERs pertaining to the specific period of 14 days are as follows;

For the year 2012–28,998 tCO₂(for 14 days i.e., from 18th Dec 2012 to 31st Dec 2012)
Hence, the actual generation is 30.51% lesser than the ex-ante average due to the poor wind availability, machine availability and grid availability.
