1.0 INTRODUCTION:

Tamilnadu Spinning Mills Association (TASMA) (project proponent) has validated its project (under VCS 2007.1 standard) namely “Bundled wind power project in Tamilnadu, India coordinated by Tamilnadu Spinning Mills Association (TASMA-II)” through TUV NORD.

The project proponent has taken already this project for verification and therefore as the next step, the monitoring report is prepared & submitted to the DOE for the purpose of verification of emission reductions generated by this project activity. This report contains monitoring data starting from 1st April 2006 to 31st December 2008

1.1 PROJECT TITLE:

Bundled Wind power project in Tamil Nadu, India, co-ordinated by Tamil Nadu Spinning Mills Association (TASMA-II)

1.2 TYPE/CATEGORY OF THE PROJECT:

According to UNFCCC definitions, the type and category of the project is defined as follows.

Project Type : Renewable Energy Project

Project Category : Grid connected electricity generation from Renewable sources

Scope Number : 01

Sectoral scope : Energy Industries

1.3 METHODOLOGY:

As the Voluntary Carbon Standard (VCS 2007.1) adopts UNFCCC’s CDM methodology, this project falls under the Approved Consolidated Methodology (ACM0002) “Consolidated Baseline Methodology for grid connected electricity generation from renewable sources”, Version 10.

1.4 DESCRIPTION OF THE PROJECT ACTIVITY:

Purpose of the project activity: The project activity is a bundled Wind power project in Tamil Nadu, India, co-ordinated by Tamil Nadu Spinning Mills Association (referred as TASMA II). The intent of the Project Activity is to reduce GHG emission and promote sustainable development by use of renewable energy (Wind) for generation of power by bringing together a number of investors with small power requirements to invest into wind turbines. In the absence of the

project activity, the equivalent amount of electricity would have been generated by the power plants connected with the southern grid which is predominantly based on fossil fuel.

Project Scenario: The project activity involves the installation of WTGs which generates approximately 803 GWh per annum of Power. The Project activity thus reduces the anthropogenic emissions of greenhouse gases (GHGs) in to the atmosphere associated with the equivalent amount of electricity generation from renewable and cleaner energy source i.e. Wind. The electricity thus generated is already being supplied to the Southern regional grid. All the 812 WTGs involved in this project with an installed capacity of 460.18 MW have already been commissioned and connected with the southern regional grid. The electricity thus generated is being used in one of the following manners:

Export the entire energy to the southern grid

(Or)

Wheel the required energy for captive consumption and banking the surplus energy or exporting the surplus energy to the grid.

1.5 LOCATION OF THE PROJECT ACTIVITY:

The project activity is a grouped project, consisting of 812 wind turbine generators (WTGs) installed in three different passes (Aralvaimozhi, Senkottah and Palghat passes) in the districts of Kanyakumari, Tirunelveli and Coimbatore, located in the State of Tamil Nadu, India.

The location of the project activity is given in detail in the Appendix - 1

2.0 MONITORING:

2.1 PROJECT START DATE:

The start date of this project activity is 31st January 2004.

2.2 MONITORING PERIOD:

The monitoring period is from 1st April 2006 to 31st December 2008.

2.3 MONITORING PLAN:

This project activity uses renewable energy i.e. wind, as a source for power generation. No other fossil/non fossil fuels are involved and no fuel preparation or combustion takes place. Therefore, the net electricity generated by the project activity is the only parameter that needs to be

monitored. The officially authenticated energy meter readings i.e. TNEB statements/meter cards are noted by the TNEB personnel on a monthly basis. Therefore, the TNEB statements/meter cards will testify the actual number of units exported to the grid and hence form the basis of Emission Reductions.

2.4 STRUCTURING FOR MONITORING:

The Management Structure for monitoring emission reductions would provide for:

- Operation and Maintenance
 - Maintenance of Meters and Calibration
 - Calculation of Emission Figures
 - Local Environmental Care
 - Changes in project boundary
 - Documents and Records
 - Periodic Review meetings
-
- TASMA through the project members have appointed a site in-charge for each site with the responsibility of operation, maintenance and safety of WTGs.
 - The Project Sponsor / Project members are abiding by all regulatory and statutory requirements as prescribed under the State and Central laws and regulations
 - The generation from the WTGs is being monitored by LCS meters attached with the wind mill and also by the main meter which is owned by TNEB.
 - TNEB meters ensure to meet the Indian and regional electricity authority's standards (CEA) (with set calibration schedules).
 - The generation for the purpose of emission reduction calculation is based on the TNEB meter, which is a statutory body.
 - All the monitoring data is being recorded and kept under safe custody of the site in-charge
 - Also any change within the project boundary, is being recorded and informed to TASMA.

The following organization is in place for facilitating monitoring:

2.5 MEASUREMENT FREQUENCY:

Frequency of measurement by TNEB - Once in a month

Frequency of measurement by Site In charge - Once in a month

Calibration of the Energy Meter - This is carried out at least once in three years

2.6 MONITORING PARAMETER:

Data / Parameter:	EGy
Data unit:	MWh
Description:	Net electricity supplied to the grid for the monitoring period from 1 st April 2006 to 31 st December 2008 (33 Months)
Source of data to be used:	TNEB statement
Value of data	2315270
Description of measurement methods and procedures to be applied:	Measured by 0.5 Class Meter – (accuracy $\pm 0.5\%$) Net generation = (Export- Import) To be certified by TNEB Statement Monthly Measurement by TNEB.
QA/QC procedures to be applied:	QA/QC of Monitoring Equipment Calibration procedure: At least once in three years
Any comment:	Data will be archived during the whole crediting period + 2 years

3.0 EMISSION REDUCTION CALCULATION:

According to the methodology outlined in ACM0002 (Version 10), the emission reductions ER_y by the project activity during a given year y is the difference between baseline emissions (BE_y), project emissions (PE_y), and emissions due to leakage (L_y), as follows:

$$ER_y = BE_y - PE_y - L_y$$

Where,

ER_y Emission reductions of the project activity during the year y in tons of CO₂

BE_y Baseline emissions due to displacement of electricity during the year y in tons of CO₂

PE_y Project emissions during the year y in tons of CO₂

L_y Leakage emission during the year y in tons of CO₂

The Baseline emissions (BE_y in tCO₂) due to displacement of grid-electricity are the product of the Emissions Factor (EF_y in tCO₂/MWh), times the electricity exported by the TASMA project activity to the grid (EG_y in MWh), over the crediting period as given below.

$$BE_y = EG_y \cdot EF_y$$

Value for EF_y is considered as **0.92694742 tCO₂e/MWh**, in the validated VCS PD as per CEA baseline information version 04.

The value applied for EG_y (actual generation and the corrected value due to delayed calibration¹) for all WTGs are listed in Appendix – 3 and the summary is presented below.

As there are no project emissions and leakage in this case, Baseline emissions are equivalent to the emission reductions. The summary of the emission reductions calculated for the monitoring period is summarized in the following table:

Monitoring Period	Actual Generation	Corrected Generation for delayed calibration	Total Achieved VCUs	Estimated VCUs during the period.
April 2006 to August 2006 (For 5 months Only)	375139411	375139411	347469	568570
September 2006 to December 2006 (For 4 months only)	224987144	224987144	208233	
Total for the year 2006 (9 Months)	600126555	600126555	555702	
Jan 2007 to June 2007 (For 6 months Only)	276984202	276946785	256364	758093
July 2007 to December 2007 (For 6 months Only)	587322120	587142017	543877	
Total for the year 2007	864306322	864088802	800241	
Jan 2008 to June 2008 (For 6 months Only)	324228645	323992665	299945	758093

¹ As per the EB 52 annex 60 “Guidelines for assessing compliance with the calibration frequency requirements” the data of WTGS for which calibration were delayed is revised with accuracy class of the corresponding energy meters. Since the calibration report states no error, as per the guidelines para 4 (a) the maximum permissible error (accuracy class) of the energy meter is applied to the delayed periods. The details of WTGs for which the Calibration is delayed and the respective period is presented in Appendix – 4.

July 2008 to December 2008 (For 6 months Only)	527290842	527062618	488188	
Total for the year 2008	851519487	851055282	788133	
TOTAL Ery(TCO2)			2144076	2084756

Note: Due to good wind years, the achieved VCUs are slightly more when compared with the estimated VCUs.
