

MONITORING REPORT

BUNDLED WIND POWER PROJECT IN TAMIL NADU, INDIA, CO-ORDINATED BY TAMIL NADU SPINNING MILLS ASSOCIATION (TASMA-II)

Document Prepared By

Tamilnadu Spinning Mills Association (TASMA)

Project Title	Bundled Wind power project in Tamil Nadu, India, co-ordinated by Tamil Nadu Spinning Mills Association (TASMA-II)
Version	2.0
Report ID	VCS project id: 249
Date of Issue	10 th June 2018
Project ID	VCS project id: 249
Monitoring Period	1 st January 2009 to 17 th December 2012
Prepared By	Tamilnadu Spinning Mills Association (TASMA)
Contact	Mr. V. Bharathi Kannan, Head – CDM / VCS Projects #2, Karur Road (Near Beschi College), Dindigul, Tamilnadu - 624 001 India Mob: +91 98428 33318; E-Mail: cdmhead@tasma.in Website: www.tasma.in

1 PROJECT DETAILS

1.1 Summary Description of the Implementation Status of the Project

The project activity is the bundling of **812** Wind Turbine Generators (WTGs) sponsored by **397** individual investors aggregating to a total installed capacity of **460.18 MW**. All these WTGs are spread in the entire State of Tamilnadu, India and the bundling activity is undertaken by Tamilnadu Spinning Mills Association (TASMA). All these WTGs are commissioned and connected to the Southern Regional Grid, India.

The intent of the Project Activity is to reduce GHG emissions and promote sustainable development by use of renewable energy (Wind) for generation of power by bringing together a number of investors with small power requirements to invest into wind turbines. In the absence of the project activity, the equivalent amount of electricity would have been generated by the power plants connected with the southern grid which is predominantly based on fossil fuel.

1.2 Sectoral Scope and Project Type

Sectoral Scope: 01

Project Type & category: The project activity uses approved consolidated baseline and monitoring methodology: ACM0002.

Title: "Consolidated Baseline Methodology for grid connected electricity generation from renewable sources", Version 10

This is not a grouped project.

1.3 Project Proponent

Provide contact information for the project proponent(s). Copy and paste the table as needed.

Organization name	Tamilnadu Spinning Mills Association (TASMA)
Contact person	Mr. V. Bharathi Kannan
Title	Head – CDM / VCS Projects
Address	#2, Karur Road (Near Beschi College), Dindigul, Tamilnadu - 624 001 India
Telephone	Mob: +91 98428 33318
Email	E-Mail: cdmhead@tasma.in Website: www.tasma.in

1.4 Other Entities Involved in the Project

Provide contact information and roles/responsibilities for any other project participant(s). Copy and paste the table as needed.

Organization name	NA
Role in the project	-

Contact person	-
Title	-
Address	-
Telephone	-
Email	-

1.5 Project Start Date

1st April 2006.

1.6 Project Crediting Period

1st April 2006 to 31st March 2016 (10 years)

1.7 Project Location

Refer Appendix.

1.8 Title and Reference of Methodology

Sectoral Scope: 01

Project Type & category: The project activity uses approved consolidated baseline and monitoring methodology: ACM0002.

Title: "Consolidated Baseline Methodology for grid connected electricity generation from renewable sources", Version 10

1.9 Other Programs

The project activity has never been rejected under any other GHG program. However, it is registered under CDM (UNFCCC no: 4760 Crediting period starting from 18th December 2012 to 17th December 2022). However, VCU revenues will be considered only for the period during which no CDM/CER benefits are claimed.

1.10 Sustainable Development

List of some of the contributions is highlighted below:

- Use of renewable energy (Wind) for generation of power
- Reduction in emission of Green House Gases
- Increase the contribution of renewable energy to Southern Grid/Tamil Nadu Electricity Grid of India.
- Encourage Industries to contribute to Green Power Development and CDM
- Reduction in procurement and use of diesel based power generation sets as power option by PP
- Overall Rural infrastructure development
- Capacity addition to the installed capacity of Southern Grid, filling up the ever-growing gap between power supply and demand
- Generation of additional employment especially for windmill operations/ maintenance/security etc.

- 2% of the CDM revenue will be used for Old Age Home for member mill workers and for Public convenience systems in selected villages.

2 IMPLEMENTATION STATUS

2.1 Implementation Status of the Project Activity

All the WTGs are operating continuously depending on the wind availability. The electricity available for carbon credit for this monitoring period is 3,518,658.22 MWh.

2.2 Deviations

2.2.1 Methodology Deviations

There is no methodology deviation.

2.2.2 Project Description Deviations

There is no project description deviation.

2.3 Grouped Project

This is not a grouped project.

2.4 Safeguards

2.4.1 No Net Harm

There is no negative environmental and socio-economic impact.

2.4.2 Local Stakeholder Consultation

The local stakeholders have already been contacted for the first bundled CDM project of TASMA. For the second project, a questionnaire survey was conducted covering the people living in the villages nearby the site. The overall opinion expressed through the questionnaire was based on the experience of the local stakeholders with the already existing windmills. The overall response was that the impact of windmills in the locality will be of positive nature. The responses are categorised as positive and negative based on the comments. The positive responses indicate that respondent feels that the project activity will lead to overall good for the society. All of the individual respondents are of the view that the project activity is of good to them and the society. It has added to the electricity generation of the state grid without causing any pollution. No negative comments were not received that required follow up action.

3 DATA AND PARAMETERS

3.1 Data and Parameters Available at Validation

Complete the table below for all data and parameters that are determined or available at validation, and remain fixed throughout the project crediting period (copy the table as necessary for each data unit/parameter). Data and parameters monitored during the operation of the project are included in Section 3.2 (Data and Parameters Monitored) below.

Data / Parameter	EF _y
Data unit	tCO ₂ e/MWh
Description	Baseline emission factor
Source of data	CEA database
Value applied	0.927305 tCO ₂ e/MWh
Justification of choice of data or description of measurement methods and procedures applied	The grid emission factor (EF _{grid}) was calculated from the operating margin (OM) CO ₂ emission factor and build margin (BM) CO ₂ emission factor, referenced from “CO ₂ Baseline Database for Indian Power Sector” by Central Electricity Authority (CEA). The weighting of operating margin emission factor and weighting of build margin emission factor are 0.75 and 0.25, respectively. The calculation of OM and BM is as per the version 1.1 of “Tool to calculate Emission Factor for an Electricity System.”
Purpose of the data	Calculation of baseline emissions
Comments	-

3.2 Data and Parameters Monitored

Complete the table below for all data and parameters monitored during the project crediting period (copy the table as necessary for each data unit/parameter). Data and parameters determined or available at validation are included in Section 3.1 (Data and Parameters Available at Validation) above.

Data / Parameter	EG _y
Data unit	MWh
Description	Net electricity supplied to the grid
Source of data	TNEB statement
Description of measurement methods and procedures to be applied	Net generation = (Export- Import) To be certified by TNEB Statement Monthly Measurement by TNEB
Frequency of monitoring/recording	Monthly
Value monitored	3,518,658.22 MWh
Monitoring equipment	Measured by 0.5 Class Meter – (accuracy ±0.5%) Refer Appendix 2
QA/QC procedures to be applied	QA/QC of Monitoring Equipment Calibration procedure: Main meter is calibrated by the TNEB as per guidelines provided by CEA/TNERC, which refers at least once in five years. However the Calibration would be carried out at least once in three years to meet the requirements under VCS. The values would be cross-checked with the Sales records. For some of the meters, there is a calibration delay for some period. PP has applied error of 0.5% to get conservative export and import. Refer Appendix 3.

Purpose of the data	Calculation of baseline emissions
Calculation method	Net generation = Export- Import
Comments	Data will be archived during the whole crediting period + 2 years

3.3 Monitoring Plan

The monitoring activity will be centrally executed by TASMA. The organization for monitoring will be as follows:

The responsibilities of Management structure are

1. TASMA:
 - a. Reviewing the monthly and annual statistics.
 - b. Evaluating the GHG performance of the project activity.
 - c. Identify opportunities for further improvement.
2. Regional representative:
 - a. Reviewing the GHG performance related parameters as recorded by the Site In-Charge regularly.
 - b. Implementation of appropriate corrective measures in case any discrepancies are identified in the reported parameters.
 - c. Ensuring calibration of the monitoring equipments as per the defined calibration schedule
3. Site In-charge:
 - a. The Site In-charge (O&M Service provider/Company personnel) besides operation and maintenance of the wind turbine generators will record monthly energy meter reading jointly with TNEB officials and submits the generation Statement to the TASMA as and when called for.

The **Metering** for WTGs of the project activity is carried out as under:

The monthly meter reading is being taken jointly by the Parties (TNEB/TANGEDCO and the Site In-charge) on a fixed day of the month. At the conclusion of meter reading on each occasion, an appointed representative of the TNEB/TANGEDCO shall sign the meter card provided for this purpose and the entries made is verified by the site in-charges. The TNEB/TANGEDCO meter reading is used for recording electricity generation and the same is sealed by TNEB/TANGEDCO and shall not be interfered other than TNEB/TANGEDCO personnel. Emission reduction calculation is based on the Generation Statement issued by TNEB/TANGEDCO.

4 QUANTIFICATION OF GHG EMISSION REDUCTIONS AND REMOVALS

4.1 Baseline Emissions

Baseline emissions calculated are summarized as below.

Base Line Emissions: (BE_y)

According to the validated PD, Baseline Emission is calculated by the following formula.

$$BE_y = EG_y * EF_y$$

Baseline emission factor (combined margin)

$$EF_y = 0.927305 \text{ t CO}_2\text{e/MWh}$$

EG_y = Electricity supplied by the project activity to the Grid (MWh)

4.2 Project Emissions

Project Emissions: (PE_y)

According to ACM0002, there is no project emission for grid connected wind based power generation. Hence in this case it is considered as **$PE_y = 0 \text{ tCO}_2\text{/year}$**

4.3 Leakage

According to ACM0002, there is no leakage emission for grid connected wind based power generation. Hence in this case it is considered as **$LE_y = 0 \text{ tCO}_2\text{/year}$**

4.4 Net GHG Emission Reductions and Removals

Emissions Reduction: (ER_y)

For a given year, the emission reductions contributed by the project activity is calculated as follows:

$$ER_y = BE_y - PE_y - LE_y$$

Where,

BE_y - Base Line Emission for the year 'y'

PE_y - Project Emissions for the year 'y'

LE_y - Leakage for the year 'y'

Year	Baseline	Project	Leakage	Net GHG
------	----------	---------	---------	---------

	emissions or removals (tCO ₂ e)	emissions or removals (tCO ₂ e)	emissions (tCO ₂ e)	emission reductions or removals (tCO ₂ e)
Year 2009	826,592	0	0	826,592
Year 2010	821,976	0	0	821,976
Year 2011	828,162	0	0	828,162
Year 2012	786,137	0	0	786,137
Total	3,262,867	0	0	3,262,867

APPENDIX 2

Note: Generally each WTG has one HTSC no. However, in some instances, two or more of WTGs have the same HTSC and hence one meter measures the combined electricity of those (e.g S.no 25 and 26 below). As a result, some values for s.no 26 is kept blank.

S. No	HTSC no	Meter Serial No	Generation in 2009 in MWh	Generation in 2010 in MWh	Generation in 2011 in MWh	Generation in 2012 in MWh
1	1285	TN 904503	1237.49	1217.11	1219.48	1208.11
