# 1 PROJECT DETAILS

## 1.1 Summary Description of the Project

Purpose of the project activity is to facilitate clean cooking practices and reduce health risk due to indoor air pollution<sup>1</sup> along with household drudgery amongst the tribal households (Schedule Tribe) and families living below the poverty level (BPL category<sup>2</sup>) in villages of Maharashtra through dissemination of improved cook stoves. The improved cook stoves through replacement of inefficient traditional cook stove will contribute towards reduction of greenhouse gas emission and by-products of incomplete combustion like black carbon, conservation of fuel wood and thereby preventing forest degradation. Successful operation of the project activity will encourage rural residents to shift from traditional cook stoves usage to the project improved and modern cook stove usage.

The higher efficiency portable, single pot cook stoves distributed and conceived under the project activity has replaced prevailing practice of using traditional cook stoves in rural areas across the state. Independent research reveals that, out of 120 million of the total potential of biomass cook stove in India<sup>3</sup> total number of household using cook stoves is around 14.904 million (WHO, UNDP 2009)<sup>4</sup> only. Study by ESMAP<sup>5</sup> revealed that, improved cook stoves accounted for less than 7 percent of the total biomass stoves used in rural areas. The report also refers to the latest national survey in India highlighting the fact that, only 5 percent of rural households possess an improved cook stove (Zhang et al. 2006). The study portrays Maharashtra amongst one of those few states where, improved cook stoves were distributed under the National Programme of Improved Chulha (NPIC) since 1983-84 and continued thereafter. The distribution was facilitated through Rural Development and Water Conservation Department, Maharashtra Energy Development Agency and Khadi and Village Industries Commission. Even after prolonged period of distribution since 1983, around 85% of households in the villages of Maharashtra still rely on traditional cook stoves.

It is worthwhile to note that firewood and wood chips contributes as major cooking fuel amongst rural households in India. According to the NSSO6 61st round survey, a considerable percentage of rural population of Maharashtra relies upon fire wood for cooking and the percentage is substantially much higher amongst the lower MPCE (Monthly Per Capita Expenditure) group. Since, the beneficiary selected under the project belongs to BPL and ST category of population in terms of capacity of expenditure therefore; improved cook stove use will result in substantial fuel wood saving as this section is the major consumer of fuel wood.

MPCE Groups	Percentage of Population using firewood <sup>7</sup>
-------------	--

Rs. 0 – 235/-	79.2%
Rs. 235 – 270/-	93.8%
Rs. 270 – 320/-	90.0%
Rs. 320 – 365/-	87.2%
Rs. 365 – 410/-	86.2%
Rs. 410 – 455/-	84.2%
Rs. 455 - 510/-	82.8%

The improved cook stoves distributed are more efficient with thermal efficiency of 29.88%<sup>8</sup> as compared to traditional stoves with thermal efficiency of around 10%<sup>9</sup>. Use of efficient cook stove will result in fuel consumption reduction i.e. non-renewable biomass (since the demand of fire wood is considerably higher than the sustainable potential of fire wood extraction and the wood available through unsustainable extraction is conceived as non-renewable biomass) through minimizing thermal energy losses by facilitating complete combustion and thereby resulting in GHG emission reduction.

### **Technology Employed**

The cook stove deployed under the project activity is single pot, portable, metallic, improved biomass cook stoves<sup>10</sup> made of cast iron for combustion of solid biomass. The improved cook stoves are manufactured in accordance to IS 13152, Part-1: 1991, CPRI Design Type I11 standard. The design ensures complete combustion of biomass. The cook stove is tested for thermal efficiency of 29.88% as per water boiling test protocol specified in IS 13152, Part 1: 1991.

### **Measures undertaken**

The Rural Development and Water Conservation (RDWC) Department, Government of Maharashtra is involved in promoting betterment of living standard for the tribal household (ST) and families living Below Poverty Line (BPL) in villages of Maharashtra. The department as a part of its aforesaid programme selects households from amongst the ST and BPL category depending upon level of vulnerability (assessed on basis of 13 parameters: Category and size of usable land, Type of house, Availability of regular usable clothes, Protection of food or food security, Cleanliness, Ownership of required goods, Heights /Level of literacy, Family working capacity, Source of livelihood goods, Number of children in age group (5 to 14), Type of bankruptcy, reason for staying away from family of Earning member, Choice of help /Yojana)<sup>12</sup> and provide financial assistance to facilitate better and hygienic living standard. The household selected for financial assistance under the programme is provided with an improved cook stove system. The household considered as end users of cook stoves under the project activity are poor enough to afford procurement of cook stoves and are also least interested towards investment as wood is available for free. So, in absence of the cook stove the household would have continued

with traditional cooking practice. Since, the project activity is conceived under the program of Govt. of Maharashtra which provides cook stove only to BPL and ST category household so; there is no chance of cook stove to be distributed to non-baseline household. The identification of beneficiaries and distribution of cook stoves comes under the preview of the Rural Development and Water Conservation Department.

The project activity plans to disseminate improved cook stoves over period of time<sup>13</sup> amongst Below Poverty Line (BPL) and Scheduled Tribes (ST) households in rural areas of Gadchiroli, Chandrapur and Nagpur districts of Nagpur Division in Maharashtra. The project is to consider beneficiaries comprising of 14,530 Nos. of household to which improved cook stoves are to be disseminated under the programme and has signed the end user Tripartite Agreement<sup>14</sup>. The project through conservation of non-renewable biomass will result in greenhouse gas emission reduction of 13,062 tCO<sub>2</sub>e annually.

Vikram Stoves and Fabricators (hereafter referred to as Vikram Stoves) is a MNRE (Ministry of New and Renewable Energy) approved manufacturer and distributor of improved cook stoves having operation network in Maharashtra. The agency is selected by the RDWC Department, Government of Maharashtra for distribution of improved cook stoves amongst identified beneficiaries. With an objective of wide spread dissemination (under limited annual budgetary support provision of the Ministry) of improved cook stoves and facilitate continual usage at beneficiary level; the manufacturer conceived CDM in its revenue model. The revenue was conceived in deciding upon the capital cost as well as to meet up the cost towards imparting awareness and training, periodic maintenance<sup>16</sup> and post lifetime replacement within the crediting period.

M/s G K Energy Marketers Pvt. Ltd (hereafter referred to as GKEMPL) is authorised as Project Participant by Vikram Stoves and the end users for development of CDM project activity for cook stove dissemination. As a part of the project activity GKEMPL (Project Participant) along with Vikram Stoves will enter into contractual agreement with the beneficiaries by virtue of which, the end user will confirm use of cook stove as well as transfer the CER right to the Project Participant.

## 1.2 Sectoral Scope and Project Type

**The project activity falls under Sectoral Scope 3: Energy Demand**

This project is not grouped project because there is no addition other project activity.

This is non-AFLOU type of project.

## 1.3 Project Eligibility

The project activity involves replacement of traditional cook stoves by improved cook stoves. The improved cook stoves owing to its higher combustion efficiency of 29.88% in

comparison to the 10% efficiency of the traditional cook stoves results in energy efficiency improvement and same do not exceed the equivalent of 60 giga watt hour thermal (GWth) per year of energy savings. Hence the project activity is eligible Sectoral scope 3 i.e. energy demand under the scope of the VCS Program.

This project activity is registered under CDM mechanism with a fixed crediting period of 15/12/2012 to 14/12/2022. The project was commissioned/started its implementation on 09/03/2011 and fixed crediting period of 10 years has been chosen for this project activity in VCS. Hence crediting period of the project activity becomes same as CDM crediting period i.e 15/12/2012 to 14/12/2022. Hence project is eligible under VCS as VCS crediting period is not breaching the CDM crediting period.

## 1.4 Project Design

The project activity plans to disseminate improved cook stoves over period of time<sup>13</sup> amongst Below Poverty Line (BPL) and Scheduled Tribes (ST) households in rural areas of Gadchiroli, Chandrapur and Nagpur districts of Nagpur Division in Maharashtra. The project is to consider beneficiaries comprising of 14,530 Nos. of household to which improved cook stoves are to be disseminated under the programme and has signed the end user Tripartite Agreement<sup>14</sup>. The project through conservation of non-renewable biomass will result in greenhouse gas emission reduction of 13,062 tCO<sub>2</sub>e annually.

### Eligibility Criteria

Not applicable to this project activity as this is not a grouped project.

## 1.5 Project Proponent

<b>Organization name</b>	M/s G K Energy Marketers Pvt. Ltd
<b>Contact person</b>	Mr. Gopal Kabra
<b>Title</b>	Authorized Signatory
<b>Address</b>	Lokmanya Nagar, LBS Road, Flat No.- 350, Building No.- 25, Ground Floor, Pune, Maharashtra – 411030 India
<b>Telephone</b>	+91-997045
<b>Email</b>	gopal@energymarketers.in

## 1.6 Other Entities Involved in the Project.

<b>Organization name</b>	EKI Energy Services Limited
<b>Role in the project</b>	Project Consultant
<b>Contact person</b>	Mr. Pankaj Rajpoot
<b>Title</b>	Assistant Manager- Operations
<b>Address</b>	Office No 201, Plot No 48, Scheme 78, Vijay Nagar Part- II, Indore 452010, India

Telephone	+91- 7828347589
Email	<a href="mailto:pankaj@enkingint.org">pankaj@enkingint.org</a>

## 1.7 Ownership

As per VCS Program Definitions version 4, the project ownership is the legal right to control and operate the project activities.

As per CDM Project Design Document section A.1, M/s. G K Energy Marketers Pvt Ltd (hereafter referred to as GKEMPL) is authorised as Project Participant by Vikram Stoves and the end users for development of VCS project activity for the cook stove dissemination. As a part of the project activity GKEMPL (Project Participant) along with Vikram Stoves will enter into contractual agreement with each beneficiaries by virtue of which the end user will confirm use of cook stove as well as transfer the CER right to the Project Participant

Based on above evidences, the project ownership is demonstrated and M/s. G K Energy Marketers Pvt Ltd is authorized project owner.

## 1.8 Project Start Date

**09/03/2011**

Since the project activity of improved cook stove usage by the end user does not require any construction or significant pre-project implementation, nor financial commitment on the part of end user therefore the real action pertaining to the project activity is considered as and when the cook stove is distributed to the end users selected by the concerned line department of Rural Development Department. The distribution initiates as soon as cook stoves are received by the concerned line department at the block and village level. The date of receipt of the cook stove from the supplier by the concerned line department is acknowledged through delivery receipt and date of the delivery receipt of the cook stove is therefore considered as the start date as it owes to the real implementation in accordance to start date definition of VCS Standard Version 04.

## 1.9 Project Crediting Period

The crediting period of the project activity is for 10 years (Fixed).

The length of the first crediting period is 15-12-2012 to 14-12-2022 (both dates inclusive).

## 1.10 Project Scale and Estimated GHG Emission Reductions or Removals

The project activity falls under small-scale project category since the annual average GHG emission reductions are less than 300,000 tCO<sub>2</sub>e.

Project Scale

Project	√
Large project	

Year	Estimated GHG emission reductions or removals (tCO <sub>2e</sub> )
Year 1	13,062
Year 2	13,062
Year 3	13,062
Year 4	13,062
Year 5	13,062
Year 6	13,062
Year 7	13,062
Year 8	13,062
Year 9	13,062
Year 10	13,062
<b>Total estimated ERs</b>	<b>130,620</b>
<b>Total number of crediting years</b>	<b>10</b>
<b>Average annual ERs</b>	<b>13,062</b>

### 1.11 Description of the Project Activity

The improved cook stove conceived under the project activity is MNRE and BIS (Bureau of Indian Standard) approved state of art and environmentally sound technology. The improved cook stove is manufactured in accordance to IS13152 (Part 1): 1991 (Solid Biomass – Chulha Part 1(Metallic)). This Indian Standard was adopted by the Bureau of Indian Standard after the draft finalized by the oil burning Appliances Sectional Committee had been approved by Heavy Mechanical Engineering Division Council and hence there has no transfer of technology for the project activity. The standard has been prepared in line with the national approach towards fuel conservation, better environment, mitigating health hazards and loss of forest cover caused by burning of wood as cooking fuel and therefore can be conceived as an environmentally sound technology for combustion of solid biomass for the purpose of cooking. Moreover, the materials used in the

manufacturing of the cook stove are of iron and steel which is recyclable after end use and hence considered to be environmentally safe after lifetime also.

The cook stove distributed under the project activity is a portable, single-pot stove without chimney, natural draft and metal made stove specifically suitable for combustion of solid biomass. The cook stove broadly comprises of a combustion chamber, top plate for holding the utensils, grate for holding fuel during combustion and bottom plate that facilitates ventilation of air. The combustion chamber is cylindrical shaped and made up of mild steel. One side of the chamber of improved cook stove is opened for feeding of fuel. The chamber top plate is die cast and made up of cast iron. All the stoves included in the project activity will remain within the project activity and as such no new stoves/ new beneficiaries will be added to the project activity.

### *Improved Cook stove*

Material used for manufacturing of each component of the cook stoves are:

Component	Material
Top plate	Cast iron
Grate	Cast iron
Barrel	Mild steel
Bottom Plate	Mild steel
Lining	Aluminum
Perforated Sleeve	Mild steel
Handle	Mild steel
Pan Support	Mild steel sheet-flat-rod
Legs	Mild steel sheet and rod

#### **Measures undertaken:**

The Rural Development and Water Conservation (RDWC) Department, Government of Maharashtra is involved in promoting betterment of living standard for the tribal household (ST) and families living Below Poverty Line (BPL) in villages of Maharashtra. The department as a part of its aforesaid programme selects households belong to ST and BPL category depending upon level of vulnerability (assessed on basis of 13 parameters: Category and size of usable land, Type of house, Availability of regular usable clothes, Protection of food or food security, Cleanliness, Ownership of required goods, Heights /Level of literacy, Family working capacity, Source of livelihood goods, Number of children in age group (5 to 14), Type of bankruptcy, reason for staying away from family of Earning member, Choice of help /Yojana)62 and provide financial assistance to facilitate better and hygienic living standard. The household selected for financial assistance under the programme is provided with an improved cook stove system. The household considered as end users of cook stoves under the project activity are poor enough to afford for procurement of cook stoves and are also least interested towards investment as wood is

available for free. So, in absence of the cook stove the household would have continued with traditional cooking practice. Since, the project activity is conceived under the program of Govt. of Maharashtra which provides cook stove only to BPL and ST category household so there is no chance the cook stove will be distributed to non-baseline household. Therefore, identification of beneficiaries and distribution of the cook stoves comes under the preview of the Rural Development and Water Conservation Department.

## 1.12 Project Location

The project is located in state Maharashtra,  
Nagpur Division, Gadchiroli, Chandrapur and Nagpur Districts

District	Gadchiroli	Chandrapur	Nagpur
Latitude	18.43 - 21.50 °N	18.40 - 20.50 °N	20.35 - 21.44 °N
Longitude	79.45 - 80.53 °E	78.50 - 80.60 °E	75.15 - 79.40 °E

Figure 1: Map of India

Figure 2: Map of Maharashtra

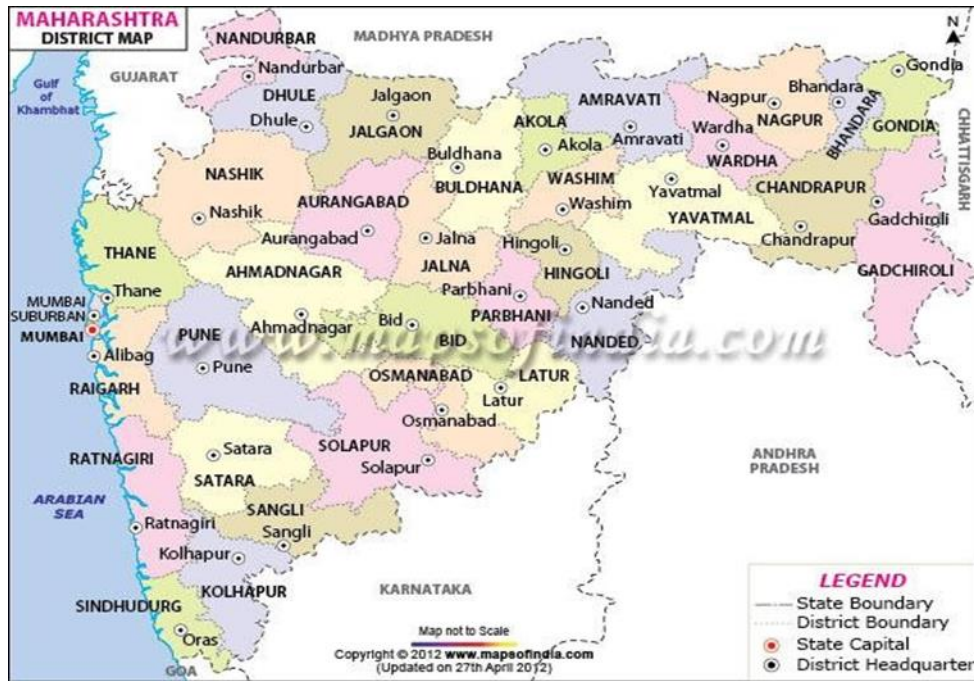

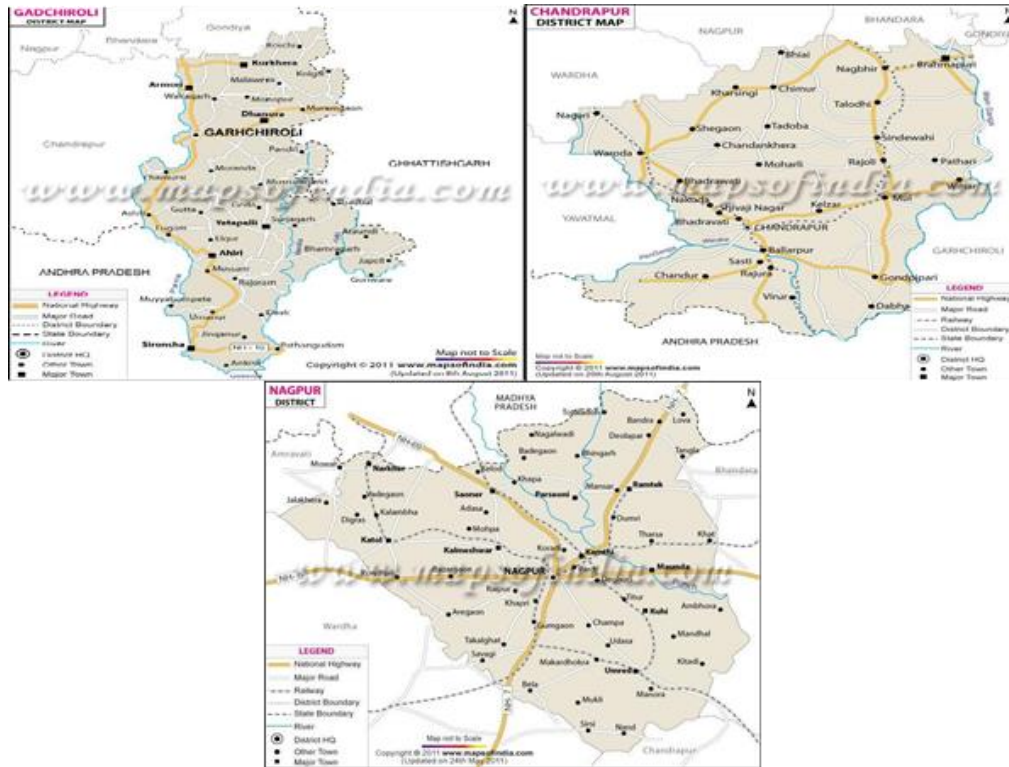

Figure 3: Map of Gadchiroli, Chandrapur and Nagpur

### 1.13 Conditions Prior to Project Initiation

The project activity involves dissemination of higher efficiency biomass fired cook stoves use as household appliances (29.88% as tested from MNRE approved Centre) for cooking purpose. This will contribute in reduction of non-renewable biomass consumption which would have been otherwise consumed by less efficient cook stoves.

Please refer to section B 4 of PDD of the UNFCCC registered CDM project with Ref No. 8725 through the web link

<https://cdm.unfccc.int/Projects/DB/RWTUV1355377748.79/view>.

### 1.14 Compliance with Laws, Statutes and Other Regulatory Frameworks

The Project has received all the necessary approvals for development and commissioning for the proposed project from the respective State Nodal Agencies and is in compliance to the local laws and regulations.

The Project has received necessary approvals for development and commissioning for cook stove project from the state Nodal agencies and is in compliance to the local laws and regulations. .

### 1.15 Participation under Other GHG Programs

#### 1.15.1 Projects Registered (or seeking registration) under Other GHG Program(s)

Project has been registration with UNFCCC under Clean Development Mechanism program, Registration reference number is 8725.

#### 1.15.2 Projects Rejected by Other GHG Programs

The Project is not rejected by any other GHG programs.

### 1.16 Other Forms of Credit

#### 1.16.1 Emissions Trading Programs and Other Binding Limits

India is Non-annex1 country and there is no compliance with an emission trading program or to meet binding limits on GHG emissions for this project activity. The project is registered under CDM with registration ID 8725. Project Proponent has submitted undertaking that they will not claim same GHG emission reductions of the project from CDM and VCS. PP would not use net GHG emission reductions by the projects for compliance with emission trading program to meet binding limits on GHG emissions. PP

has also submitted an undertaking stating that they will not take REC benefits for the same Emission Reductions.

### 1.16.2 Other Forms of Environmental Credit

Project has been registered with UNFCCC under Clean Development Mechanism program. Registration reference number is 8725. Project Proponent has submitted undertaking for not availing other forms of environmental credit for the same crediting period under consideration. Project Participant is not taking REC benefits for the same emission reductions.

## 1.17 Additional Information Relevant to the Project

### Leakage Management

Not applicable to this project activity.

### Commercially Sensitive Information

No commercially sensitive information has been excluded from the public version of the project description.

### Sustainable Development

The project contribution towards sustainable development is established in line with the sustainable development indicator framed by the host country DNA

#### **Social benefits:**

Reduces drudgery of women and children of rural areas (due to reduced fuel wood use) by reducing time spent and distance travelled for fuel wood collection. Reduction in firewood requirement would help in spending more time in productive activities such as education, employment etc.

Improves overall health (particularly diseases related to respiratory system) of women and children by reducing smoke in the kitchen

#### **Environmental benefits:**

Improves the local environment by reducing rate of forest degradation /deforestation in the project area. Conservation of forest will not only reduce non-renewable biomass demand and also reduce soil erosion and loss of biodiversity as a consequence of deforestation.

Reduces emission of black carbon to the atmosphere.

Reduces Green-house gas emissions.

**Economic benefits:**

Employment opportunities for local communities involved in monitoring, training of users, undertaking periodic maintenance and post life time replacement.

Reduces the expenditure involved in the pre project scenario for purchase of fuel wood.

**Technological benefits:**

Introduction of new technology to the rural communities.

Knowledge transfer to trainers including technicians for pertaining training to users, maintenance of system.

Demonstration of a successful project at household level will create replication potential in other states and countries.

In view of the above, the project proponent considers that, the project activity profoundly contribute towards sustainable development of the region as well as of the nation.

**Further Information**

There are no information or incidents that will have bearing on the eligibility of the project, the net GHG emission reductions or removals, or the quantification of the project's net GHG emission reductions or removals.

## 2 SAFEGUARDS

### 2.1 No Net Harm

According to the Ministry of Environment and Forests (MoEF), Government of India, under the Environment Impact Assessment Notification vide S .O.1533(E), dated 14/09/2006; the project activity of utilization of Improved Cook stove for cooking in rural households does not require environmental impact assessment study to be carried out.

### 2.2 Local Stakeholder Consultation

Please refer to sections E 1 and E 2 of PDD of the UNFCCC registered CDM project with reference no. 8725.

The web link of the same is given below:

<https://cdm.unfccc.int/Projects/DB/RWTUV1355377748.79/view>

## 2.3 Environmental Impact

Please refer to D 1 of PDD of the UNFCCC registered CDM project with reference no. 8725.

The web link of the same is given below:

<https://cdm.unfccc.int/Projects/DB/RWTUV1355377748.79/view>

## 2.4 Public Comments

The project Description has been web-hosted. Public comments will be incorporated once the commenting period is over.

## 2.5 AFOLU-Specific Safeguards

Not Applicable.

# 3 APPLICATION OF METHODOLOGY

## 3.1 Title and Reference of Methodology

Consolidated baseline methodology for “Energy efficiency measures in thermal applications of non-renewable biomass”; AMS II-G, Version 04.0.0 Sectoral Scope: 03, EB 68.

## 3.2 Applicability of Methodology

The project activity involves replacement of the traditional cook stoves by improved cook stoves. The improved cook stoves owing to its higher combustion efficiency of 29.88% in comparison to 10% efficiency of the traditional cook stoves results in efficiency improvement and same do not exceed equivalent of 20 Giga watt hour (GWh) (60 Giga watt hour thermal (GWhth)) per year. As such in accordance to General Guidelines to SSC CDM Methodologies, Version 17; the project is selected for applying small scale methodologies under Type II. As the cumulative energy saving from the project activity is less than 20 GWh/annum or 60 GWhth/annum and each of the independent sub-systems i.e. Improved cook stoves used in household only for the purpose of cooking results an estimated annual energy savings of 4.073 MWhth or 1.358 MWh (detailed calculation presented in section B.5. of the PDD) which is well smaller than permissible limit of 600 MWh. Therefore, the project is considered appropriate to be developed under micro small scale guidelines. The applicability criteria of the chosen methodology AMS-II. G (Version 03) is satisfied by the project activity in following manner:

**Criteria 1:**

This category comprises appliances involving the efficiency improvements in the thermal applications of non-renewable biomass. Examples of these technologies and measures include the introduction of high efficiency biomass fired cook stoves or ovens or dryers and/or improvement of energy efficiency of existing biomass fired cook stoves or ovens or dryers.

**Justification:** The project activity involves dissemination of higher efficiency biomass fired cook stoves use as household appliances (29.88% as tested from MNRE approved centre) for cooking purpose. This will contribute in reduction of non-renewable biomass consumption which would have been otherwise consumed by less efficient cook stoves. Since, it is an introduction of high efficiency cook stove the above condition is justified.

**Criteria 2:**

Project participants are able to show that non-renewable biomass has been used since 31 December 1989, using survey methods or referring to published literature, official reports or statistics.

**Justification:** Use of non-renewable biomass is established through demonstration of gap between the demand of fire wood and silviculturally permissible production of biomass from forest and tree outside forest. The fact is established using published literature referring to the following studies:

Food and Agricultural Organisation of United Nation - Regional Wood Energy Development Programme in Asia

The literature highlights gap in demand and supply of fuel wood across the country as well as across the state of Maharashtra. In accordance to the study, fuel wood consumption in real terms is much higher than the recorded production of about 30%; thus, leaving a wide gap leading towards unsustainable extraction of fire wood. Moreover, on account of population pressure, demand for firewood has outstripped natural regeneration and planting, so much so that in some areas there is food to eat but not enough wood is available to cook it (Mathur, 1987)". The report also highlight the statistics from Forest Survey of India (FSI1988:46) which estimated a gap of 130 million tonne between the demand and internal production of firewood in the country in 1987. The study also highlight demand for fuel-wood across Maharashtra in 1980 around 17 million cu.m.as against the production of 1.5 million cu. m. from the recorded forest (Pethiya & Luthra, 1991). The quoted demand supply gap of fire wood is also highlighted in the finding of the National Council for Applied Economic Research (NCAER)

State of Forest Report 198739, MoEF, Govt. of India

The report highlights gap between the demand and production of fire wood as major cause of deforestation. The reported consumption and production across the country within silviculturally permissible limit across the following years is indicated as follows –

Year	Consumption in million tonnes	Recorded Production in million tonnes
1953-54	86.3	6.49
1960-61	99.6	8.15
1965-66	109.3	9.16
1970-71	117.9	11.62
1975-76	133.1	19m. from forest and 30 m. from tree outside forest

In accordance the gap between demand and production is met through pilferage leading to continuous depletion of forest land.

Wood Fuel Trade in India: Food and Agricultural Organisation of United Nation:

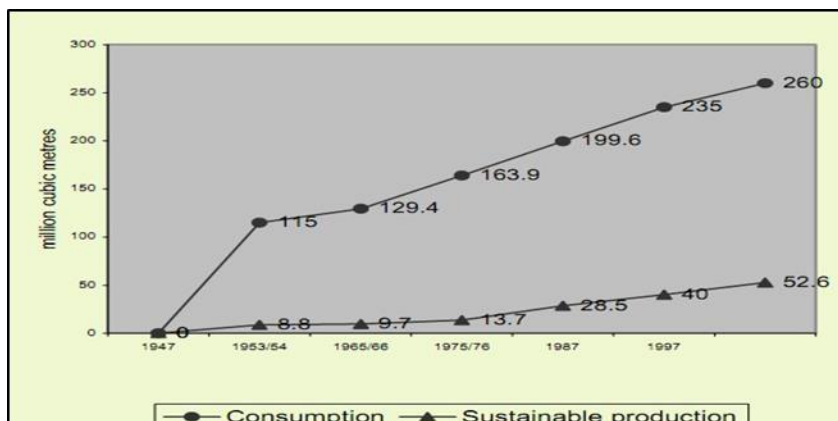

The report outlines demand- supply gap which has referred the expert committee report of MoEF dated 30.01.1998 as below –

In million cubic metre			
Year	Consumption	Sustainable Production	Gap
1953-54	115.0	8.8	106.2
1965-66	163.9	13.7	150.2
1975-76	199.6	28.5	171.4
1987-88	235.0	40.0	195.0

Rural energy data sources and estimations in India - TERI

The report refers to gap between consumption and recorded production of fuel-wood has however, increasing, indicating seriousness of the fuel-wood scarcity in India.

Figure 6: Fuel wood consumption and sustainable production since 1947

### Conclusion:

Therefore, it is established from the above studies that, a staggering gap exists between the demand and potential for sustainably extractable fuel wood from forest land. While the first three studies refer to the fuel wood supply scenario and the gap that were precedent before 1989; the study by TERI highlight the widening of gap between the demand and supply of biomass after 1989. The widening of the gap has been for both reasons - due to the increased population pressure as well as the conversion of dense forest to medium dense, scrub and open type forest land due to unsustainable extraction even after the government's initiative towards promotion of afforestation. Thus, it can therefore be concluded that, the gap exists from and before 1989 and continued thereafter, forcing the population in using biomass extracted in un-sustainable manner which is identified as non-renewable component.

As demonstrated above, the project activity satisfies qualifying criteria of the selected methodology AMS - II.G. Hence, choice of the methodology is justified.

### 3.3 Project Boundary

According to the Paragraph 3 of approved methodology AMS-II.G., "The project boundary is the physical, geographical site of the efficient systems using biomass".

The project boundary is therefore, encompasses physical, geographical sites of all 14,530 individual households possessing efficient cook stove in districts of Gadchiroli, Chandrapur and Nagpur of Nagpur Division, Maharashtra. Based on the methodology, GHG included for the baseline and project scenario, leakage for the project activity is CO<sub>2</sub>.

Source		Gas	Included?	Justification/Explanation
Baseline	Emission from combustion of	CO <sub>2</sub>	Included	This is the major Green-house gas emitting

Source	Gas	Included?	Justification/Explanation	
fuel wood in traditional cook stove			from combustion of fuel wood in the baseline scenario.	
	CH <sub>4</sub>	Excluded	Not applicable as per the applicable methodology.	
	N <sub>2</sub> O	Excluded	Not applicable as per the applicable methodology.	
	Emission from consumption of fuel wood in efficient cook stoves	CO <sub>2</sub>	Excluded	Not applicable as per the applicable methodology.
		CH <sub>4</sub>	Excluded	Not applicable as per the applicable methodology.
		N <sub>2</sub> O	Excluded	Not applicable as per the applicable methodology.
Leakage Emission	Leakage related to the use/ diversion of non-renewable woody biomass saved under the project activity by non –project households/users	CO <sub>2</sub>	Included	Baseline fuel wood consumption is multiplied by a net to gross adjustment factor of 0.95 to account for leakages.
		CH <sub>4</sub>	Excluded	Not applicable as per the applicable methodology.
		N <sub>2</sub> O	Excluded	Not applicable as per the applicable methodology.
	Leakage related to if equipment utilised under the project activity is transferred from outside the boundary	CO <sub>2</sub>	Excluded	Not applicable as the equipment is new and not transferred from outside the boundary.
		CH <sub>4</sub>	Excluded	Not applicable as the equipment is new and not transferred from outside the boundary.
		N <sub>2</sub> O	Excluded	Not applicable as the equipment is new and not transferred from outside the boundary.

### 3.4 Baseline Scenario

Please refer to section B 4 of PDD of the UNFCCC registered CDM project reference no. 8725.

The web link of the same is given below:

<https://cdm.unfccc.int/Projects/DB/RWTUV1355377748.79/view>

### 3.5 Additionality

Please refer to section B 5 of PDD of the UNFCCC registered CDM project with reference no.8725.

The web link of the same is given below:

<https://cdm.unfccc.int/Projects/DB/RWTUV1355377748.79/view>

### 3.6 Methodology Deviations

Not Applicable, as there are no methodological deviations for this project activity.

## 4 QUANTIFICATION OF GHG EMISSION REDUCTIONS AND REMOVALS

### 4.1 Baseline Emissions

Please refer to section B 6.1 of PDD of the UNFCCC registered CDM project with reference no. 8725.

The web link of the same is given below:

<https://cdm.unfccc.int/Projects/DB/RWTUV1355377748.79/view>

### 4.2 Project Emissions

Please refer to section B 6.1 of PDD of the UNFCCC registered CDM project with reference no. 8725.

The web link of the same is given below:

<https://cdm.unfccc.int/Projects/DB/RWTUV1355377748.79/view>

### 4.3 Leakage

Please refer to section B 6.1 of PDD of the UNFCCC registered CDM project with reference no. 8725.

The web link of the same is given below:

<https://cdm.unfccc.int/Projects/DB/RWTUV1355377748.79/view>

#### 4.4 Net GHG Emission Reductions and Removals

Please refer to section B 6.4 of PDD of the UNFCCC registered CDM project with reference no. 8725.

The web link of the same is given below:

<https://cdm.unfccc.int/Projects/DB/RWTUV1355377748.79/view>

Year	Estimated baseline emissions or removals (tCO <sub>2</sub> e)	Estimated project emissions or removals (tCO <sub>2</sub> e)	Estimated leakage emissions (tCO <sub>2</sub> e)	Estimated net GHG emission reductions or removals (tCO <sub>2</sub> e)
Year 1	13,750	0	688	13,062
Year 2	13,750	0	688	13,062
Year 3	13,750	0	688	13,062
Year 4	13,750	0	688	13,062
Year 5	13,750	0	688	13,062
Year 6	13,750	0	688	13,062
Year 7	13,750	0	688	13,062
Year 8	13,750	0	688	13,062
Year 9	13,750	0	688	13,062
Year 10	13,750	0	688	13,062
<b>Total</b>	<b>137,500</b>	<b>0</b>	<b>6,880</b>	<b>130,620</b>

## 5 MONITORING

### 5.1 Data and Parameters Available at Validation

Please refer to section B 6.2 of PDD of the UNFCCC registered CDM project with reference no. 8725.

The web link of the same is given below:

<https://cdm.unfccc.int/Projects/DB/RWTUV1355377748.79/view>.

## 5.2 Data and Parameters Monitored

Please refer to section B.7.1 of PDD of the UNFCCC registered CDM project with reference no. 8725.

The web link of the same is given below:

<https://cdm.unfccc.int/Projects/DB/RWTUV1355377748.79/view>.

## 5.3 Monitoring Plan

Please refer to section B.7.3 of PDD of the UNFCCC registered CDM project with reference no. 8725.

The web link of the same is given below:

<https://cdm.unfccc.int/Projects/DB/RWTUV1355377748.79/view>
