

PROJECT REVIEW REPORT

Project ID	1792
Project Name	Ghani Solar Renewable Power Project by Greenko Group
Program(s)	VCS
Verification Period	01 January 2021 – 31 July 2021
Project Proponent	Zuvan Energy Private Limited
Methodology	ACM0002, Grid-connected electricity generation from renewable sources, v18.1
Sectoral Scope(s)	1. Energy industries (renewable / non-renewable sources)
Validation/Verification Body (VVB)	Earthood Services Private Limited
Assessment Criteria	VCS Standard, v4.1
Date of First Issue	3 January 2022
Date of Final Issue	1 February 2022

Summary:

An accuracy review of the Ghani Solar Renewable Power Project by Greenko Group verification approval request has been conducted by Verra in accordance with Section 4.3 of the *Registration and Issuance Process*.

The accuracy review has raised five assessment findings and no minor findings, detailed below. The VVB, in coordination with the project proponent, is hereby required to provide a response to the assessment findings presented in Section 1. The five assessment findings must be addressed to the satisfaction of Verra.

This project review report will be made publicly available. Confidential information may be provided as separate attachments.

1. ASSESSMENT FINDINGS

Finding 1

The summary of the verification report states that ESPL was contracted by Infinite Solutions. Infinite Solutions was not mentioned in the monitoring report or other project proponent documents. The project proponent is requested to clarify the role of Infinite Solutions in the project. The VVB is requested to assess the updates and to update the verification report, as needed.

VVB Response:

Please be noted that Infinite Solutions was involved as other entity (consultant) during previous monitoring period. Since the entity Infinite solutions is not involved during this monitoring period; hence the verification report is updated accordingly. VVB apologizes for the inconvenience caused due to the copy paste error.

Verra Response:

The documents have been updated. This finding is closed, and no further action is required.

Finding 2

Section 3.4.3 of the *VCS Standard, v4.0* states that “the project proponent shall use the *VCS Monitoring Report Template...* and adhere to all instructional text within the template.”

Sections 1.4 - 1.10 of the monitoring report do not align with the section numbers for sections 1.4 - 1.11 of the *VCS Monitoring Report Template, v4.0*. In particular, section 1.4 of the *VCS Monitoring Report Template, v4.0* instructs the project proponent to provide contact information of other entities involved in the project. Section 1.4 of the monitoring report does not address if another entity is involved in the project.

The project proponent is requested to update the monitoring report to align the report with the *VCS Monitoring Report Template, v4.0*. The VVB is requested to assess the updates and to update the verification report, as needed.

VVB Response:

The section numbers for sections 1.4 - 1.11 of the VCS Monitoring report has been aligned in line with VCS Monitoring Report Template, v4.0. The section 1.4 of the monitoring report has been added the other entity involved in this project activity.

There is no other entity involved in the project activity during the current verification. The VVB has verified the updated MR and found to be satisfactory.

Verra Response:

The monitoring report has been updated. This finding is closed, and no further action is required.

Finding 3

Section 4.1.8(4) of the *VCS Standard, v4.1* states that “the threshold for materiality with respect to the aggregate of errors, omissions and misrepresentations relative to the total reported GHG emission

reductions and/or removals shall be five percent for projects and one percent for large projects.”

Section 1.3 of the verification report states that “materiality for the project is 5%.”

The project description for the project classifies the project as a large project.

The VVB is requested to clarify how they selected the materiality threshold and how they are in compliance with the VCS Standard.

VVB Response:

Since the project activity is large project, hence materiality for the project is 1% in line with the clause 4.1.8 (4) of the VCS standard version 4.1. VVB has updated the Section 1.3 of the verification report including the relevant information’s.

Verra Response:

The verification report has been updated. This finding is closed, and no further action is required.

Finding 4

Section 4.5 of the verification report states that the actual emission reductions achieved for the monitoring period are 23% higher than estimated due to a high PLF. The verification report states that the high PLF is due to the peak wind season.

This project is a solar power project.

The VVB is requested to clarify how the peak wind season influences the actual emission reductions achieved this monitoring period.

VVB Response:

VVB apologizes for the copy paste error, the same is rectified under section 4.5 of the verification report. Impact of the summer months (peak solar season) on the PLF is described under section 4.5 of the verification report.

Verra Response:

The verification report has been updated. This finding is closed, and no further action is required.

Finding 5

Section 4.1.14 of the VCS Standard, v4.1 states that the verification shall be accompanied by a verification representation, which shall be prepared using the *VCS Verification Deed of Representation Template*.

The *VCS Verification Representation, v4.1* template instructs the VVB to include the signature of the director.

The verification representation does not include the hand-drawn signature of the director.

The VVB is requested to re-submit the verification representation with a hand-drawn signature by the director.

VVB Response:

Verification representation with a hand-drawn signature by the director is being submitted along with revised VCR.

Verra Response:

The verification report has been submitted. This finding is closed, and no further action is required.

2. MINOR FINDINGS

No minor findings were raised.

3. ASSESSMENT CONCLUSION

On 3 January 2022, Verra sent Earthood Services Private Limited the project review report with five assessment findings and no minor findings.

On 1 February 2022, Verra closed all findings and approved the VCS verification approval review.
