

VCS PROJECT REVIEW REPORT

Project ID	1824
Project Name	<i>Liucheng Biomass Power Generation Project</i>
Project Proponent	<i>Liuzhou City Xin'neng Biomass Power Generation Co., Ltd.</i>
Methodology	<i>ACM0002, Grid-connected electricity generation from renewable sources, v19.0; ACM0006, Electricity and heat generation from biomass v14.0</i>
Sectoral Scope(s)	<i>1. Energy (renewable/non-renewable)</i>
Validation/Verification Body (VVB)	<i>LGAI Technological Center, S.A. (Applus+)</i>
Registry	APX

Assessment Criteria	<i>VCS Standard, v3.7</i>
Date of First Issue	22 March 2019
Date of Final Issue	25 March 2019

Summary:

An accuracy review of the Liucheng Biomass Power Generation Project issuance request has been conducted by Verra in accordance with Section 4.3 of the *Registration and Issuance Process*.

The accuracy review has raised one assessment findings and no minor findings, detailed below. The VVB, in coordination with the project proponent, is hereby required to provide a response to the assessment finding presented in Section 1. The assessment finding must be addressed to the satisfaction of Verra.

This findings report may be made publically available. Confidential information may be provided as separate attachments.

1 ASSESSMENT FINDINGS

Finding 1:

Section 3.6.16 of the *VCS Standard v3.7* states “The monitoring report describes all the data and information related to the monitoring of GHG emission reductions or removals. The project proponent shall use the VCS Monitoring Report Template, VCS Joint Project Description & Monitoring Report Template, VCS & CCB Monitoring Report Template or VCS+SOCIALCARBON Monitoring Report Template, as appropriate, and adhere to all instructional text within the template..”

Section 3.3 of the project monitoring report has been left incomplete. As stated in the monitoring report template, a monitoring plan must be included in the document.

Considering that the intended purpose of including a monitoring plan is to demonstrate that the project has established a GHG information system for obtaining, recording, compiling and analysing data and information important for quantifying and reporting GHG emissions; Section 3.3 must be completed in full and assessed by the selected VVB. The project proponent is requested to please update the monitoring report to include the project’s monitoring plan.

VVB Response:

After a conversation with VCS Staff in charge of this project review report, it was clarified that the Section 3.3. of the monitoring report (final version) has been fulfilled. There was an incorrect version of the Monitoring Report in which the Section 3.3. appears blank, being taken into account in the review process, hence it is understood that the situation has been clarified along with the support and collaboration of the VCS Team and it has the proper version of the Monitoring Report for finalizing the review.

Verra Response:

2 MINOR FINDINGS

No minor findings were raised.

3 ASSESSMENT CONCLUSION

Closed.
