During the project period, the following issues were documented: nozzle replacement; water accumulation in gas pipes; emptying and re-plastering of the dome; excessively watery or dried dung; kitchens not in use; temporary absence of households from the village; lack of interest from households in using the biogas unit; repairs to gas pipes, outlets, tanks, and stoves; replacement of gas pipes, gate valves, and stoves; sale of cattle; and demolition of units by end-users.

Emission reduction calculations are conducted exclusively for units that are operational. The dates of issue occurrence and resolution are systematically recorded and entered in the online monitoring system, which forms the basis for emission reduction calculations.
