

OUR ICA- UNDERSTANDING OPERATIONAL CARBON EFFICIENCIES

- For any carbon removal technology, it's critical that you remove more carbon than you emit
- At UNDO we track emissions across all stages of our operational processes to understand the carbon expenditure
- This allows us to accurately measure the efficiency to deduct any emissions from carbon calculations
- It also allows us to focus on reducing carbon-heavy elements of the process
- Operations to date have shown a 95% efficiency, with carbon expenditure at around 5% of all carbon removed
- All LCA documents are submitted to the VVB for project emissions to be deducted at the point of verification
