

QUALITY REPORT

Seeing the Forest for the Trees

CAR-1648 · CAR · Mexico

Report ID: CM-1F43E8AF · Generated: 2026-04-23 · Scoring Methodology: General v2.0

3.6 Overall Score out of 10	■ Integrity (35%)	4.0
	■ Transparency (25%)	3.5
	■ Claim Safety (25%)	3.0
	■ Documentation (15%)	4.0

Weights: Integrity 35% · Transparency 25% · Claim Safety 25% · Documentation 15%

Assessment Summary

The project shows some strengths (VVB-confirmed additionality and a sizeable buffer pool) but key gaps — no baseline method, no leakage quantification, limited documentation and no safeguards or FPIC — materially weakened confidence. Overall quality is low-to-moderate; further documentation and clarity are required to raise the score.

Project Details

Registry	Climate Action Reserve (CAR)
Registry ID	CAR-1648
Sector	redd
Country	Mexico
Vintage	Recent
Project Methodology	Mexico Forest Protocol 3.0
Crediting Period	2021 — 2151
Confidence	Medium
Documents Reviewed	122 documents reviewed
Scored	2026-04-23

Red Flags

- No baseline method or baseline reassessment found in available documents
- Leakage treatment not stated and leakage deduction not provided
- Leakage not addressed in project documentation

Score Breakdown

Integrity — 4.0 / 10

- + VVB-confirmed additionality reported in the extracted verification record
- No baseline method or leakage deduction stated; reversal events are reported despite a buffer pool

The extracted verification record indicates additionality was confirmed by the VVB, which supports the project's additionality claim. A buffer pool of 29.32% is documented and described as covering reversals, which helps permanence. However, no baseline method or baseline reassessment is found in the available documents, leakage is not quantified or justified, and reversal events are reported; these gaps weaken baseline validity and leakage handling and reduce confidence in long-term integrity.

Transparency — 3.5 / 10

- Only one evidence document listed ('unknown') and monitoring period and VVB name not provided
- Buffer pool percentage (29.32%) is stated, providing some disclosure

Disclosure is limited: the record lists only one evidence document labeled 'unknown', the VVB name and monitoring period are not provided, and total removals claimed versus verified is not stated. Methodology name and version are provided (Mexico Forest Protocol, version 3.0) and the buffer pool percentage is disclosed, but overall public transparency and MRV detail are insufficient in the extracted materials.

Claim Safety — 3.0 / 10

- + Project is stated as not CORSIA-eligible, lowering one category of double-claim risk
- Core data for baseline, leakage and net-removals-by-risk (FNRB) are not found, raising over-crediting risk

The project is reported as not CORSIA-eligible, which reduces one double-claim vector. However, the absence of a stated baseline method, no FNRB value, no leakage deduction, and no usage/monitoring rates in the record create a significant risk of over-crediting. Without those core inputs it is not possible to evaluate whether credited removals are conservative.

Documentation — 4.0 / 10

- + Methodology version (3.0) and 'Mexico Forest Protocol' are recorded
- Only one unspecified evidence document and medium extraction confidence; no document dates or VVB name

The extracted record cites one document (labelled 'unknown') and extraction confidence is medium, indicating potential readability or completeness limits. Methodology name and version are present and no material findings or corrective actions were recorded. Important metadata (document dates, VVB name, monitoring report) are missing, so documentation completeness and recency are limited.

Risk Indicators

● Additionality	VVB-confirmed additionality
● Permanence	Buffer pool present; reversals reported
● Leakage	Leakage not addressed
● Baseline	Baseline method not stated
● Safeguards	FPIC and grievance not documented
● Double-claim	CORSIA ineligible but CCP status unknown

What Would Improve This Score

- Provide full verification and monitoring reports (dated) including the stated baseline method, baseline reassessment timing, and quantified leakage deduction with justification
- Publish VVB name, monitoring period data, total removals claimed vs verified, and documentation of FPIC/grievance processes or other safeguards
